TecAlliance SSO

**A single point secure access for
all your TecAlliance products!**

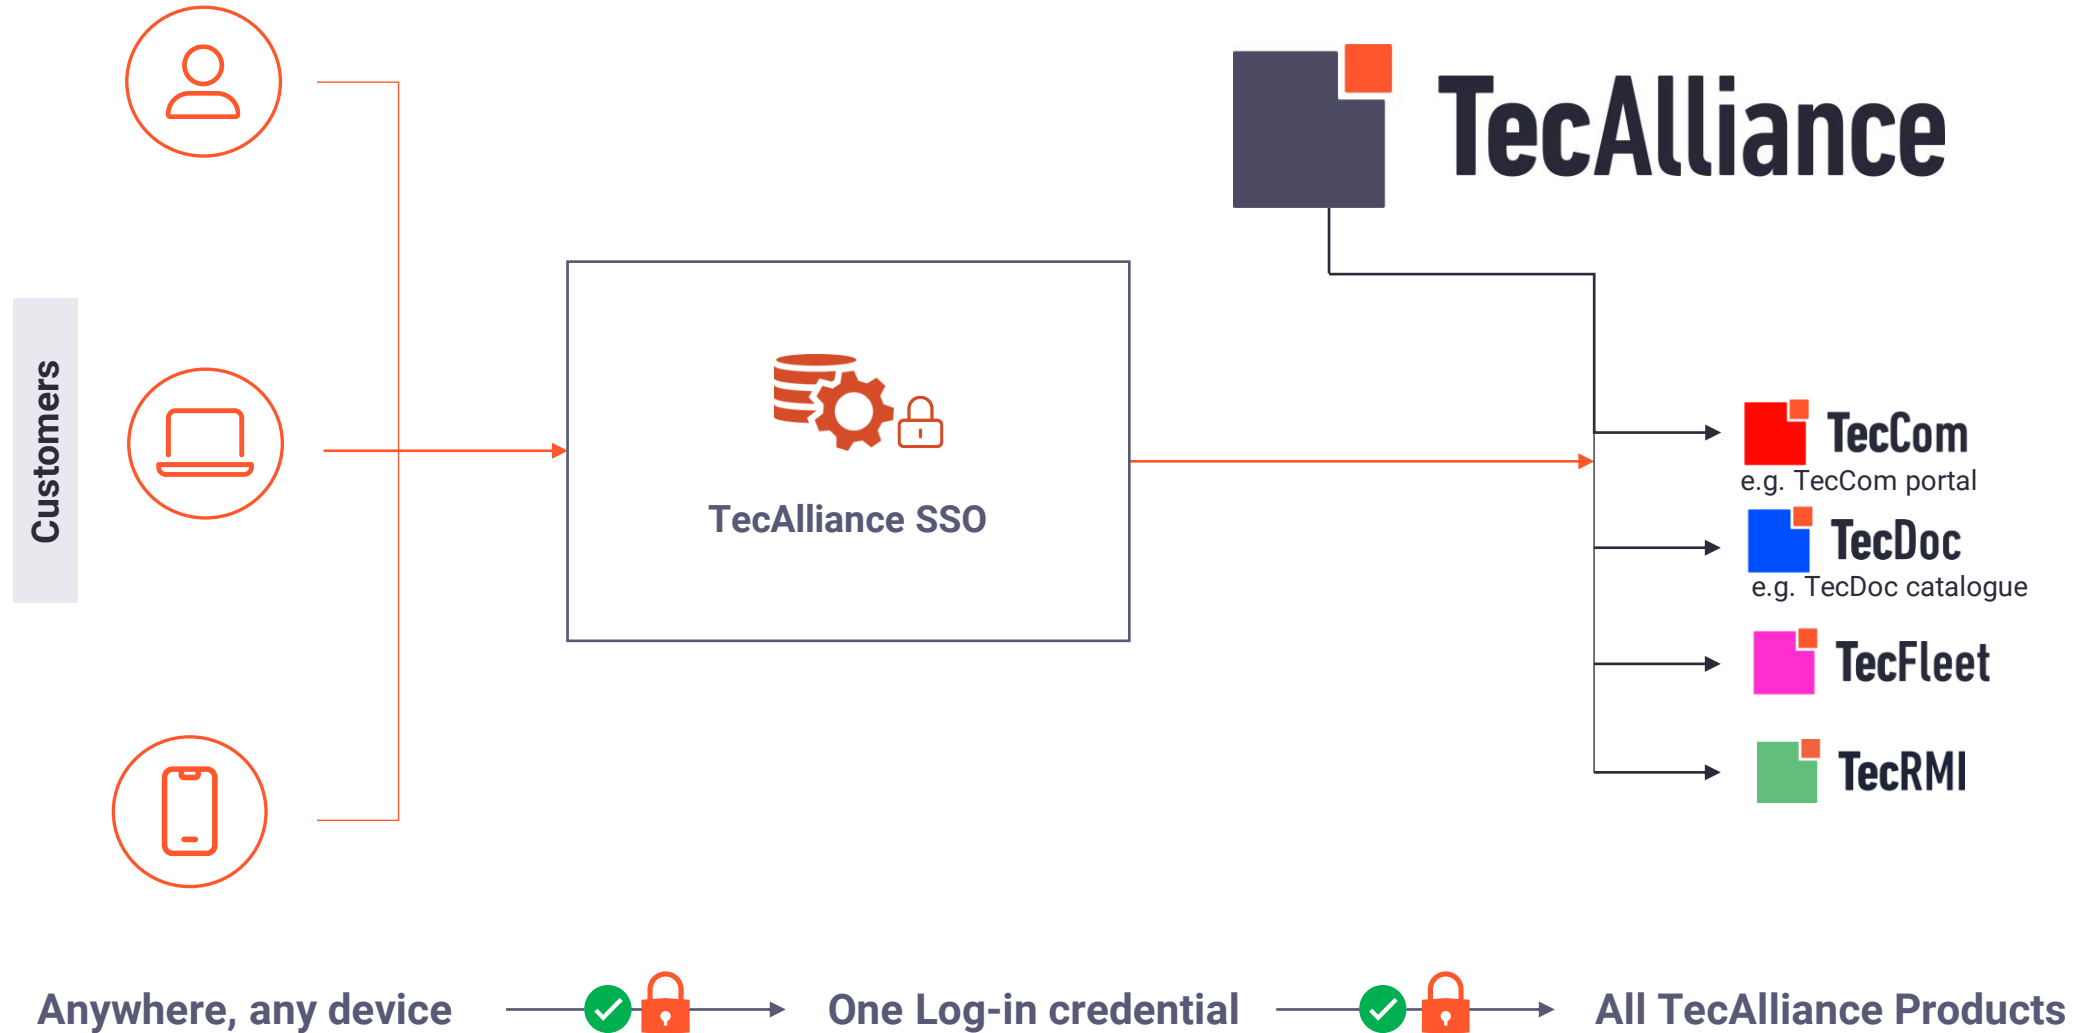

What is TecAlliance SSO?

- TecAlliance introduces new TecAlliance SSO that allows a customer to **access and use all TecAlliance products with a single log in credential***.
- TecAlliance offers a broad **range of aftermarket solutions** and many of our customers use majority of the TecAlliance services.
- Keeping **data security and customer usage satisfaction** in mind, we have introduced TecAlliance SSO that enhances the customer usage experience across TecAlliance solutions.
- Now, our customers can access all the solutions with **a single log-in credential**, reducing sign-in complexities. Our TecAlliance SSO helps further in **improving data security, minimizing the risk of hacking**.
- More and more companies are strengthening their customer sign-in procedures to **provide maximum comfort**. As a widely used automotive aftermarket solution provider, we will our sign-in processes better than ever!

* when all TA solutions support SSO

TecAlliance SSO Overview

Overall benefits of TecAlliance SSO

1. **Easy access** across TecAlliance products/solutions without reentering multiple log-in credentials.
2. **Federated log in** possibilities i.e., use your own corporate log-in credential to sign into any TecAlliance solution
3. **Centralized management of user access** for our customers – Give, manage or revoke accesses to your system easily and quickly without additional efforts.
4. Introduce and **practice strong password policies** that requires a user to set secure passwords, protecting your data, minimizing hacking risks.
5. **Reduced IT costs** due to a smaller number of password setting related IT calls.
6. Enhance user experience by **reducing password fatigues**. No more a user needs to remember multiple passwords, reducing auto-saves on browsers. This leads to lesser chances of data breaches
7. **Reduce on-premise security risks**. Whether you have suffered a data breach or not, your risk for becoming a hacking victim is growing higher every year. One of the most common way for the hackers is to fetch unsafely saved log-in data. Therefore, entrusting your authentication process to an external vendor mitigates the on-premise security risk. The hackers need to target the external vendor and not your on-premise systems. Such vendors protect your data with state-of-the-art technologies.

TecAlliance SSO Overview

One Log-in credential for all TecAlliance products

Easy integration & further simplification for different business cases

High security for your system & data

Security best practices

Multifactor authentication; social log-ins & federation log ins
